

ML-790 for Hospitality

ML-790 meets your needs at the hospitality point of sale - reliably, sensibly, affordably.

Features

Multi-line Colour Screen

The colour multi-line operator screen with Menu Windows and Operator Prompts enables staff to serve customers fast and accurately. The screen can be tilted and contrast adjusted to avoid glare and reflection.

Your credit card customers are served efficiently

ML-790 is available with integrated chip and PIN providing fast, accurate sales and avoiding time consuming end of day reconciliation work.

Good looking and neat

ML-790s low-profile good looks are enhanced by its hidden, telephone-style, plug-in connectors, avoiding unsightly wires on view and accidental disconnection of cables. Where cabling is difficult or terminals need to be moved, ML-790s can be linked wirelessly.

- Optional integrated Chip and PIN
- Multi-line colour display screen
- 70,000 product memory

Peripherals

Multisite

For pubs, clubs, bars, fast food and fine or casual dining,
the ML-790 meets your needs at the hospitality point of sale

Stand-alone or multi-terminal EPOS system

ML-790 can operate stand-alone or can link with other ML-790s to consolidate information, providing easy management reporting. One ML-790 can drive up to 3 remote kitchen/bar printers or up to 8 printers can be connected in the network.

Intuitive fixed price menus speed service

ML-790 can hold a number of fixed price menus. Intelligent prompting advances automatically to mains or desserts once previous courses have been entered.

Descriptive Customer Display

The fully adjustable 2-line alphanumeric customer screen displays the order as it is processed and can be viewed from the rear or either side. An advertising message can scroll across the display between sales.

Silent, fast, thermal printing

The heavy-duty, 16 digit alphanumeric printer operates at 13 lines per second with your company logo printed on each receipt.

Server Interrupt

For busy bars, pubs and fast food outlets, ML-790's Server Interrupt feature permits up to 50 operators to serve and store rounds of drinks on the same unit concurrently by server ID or magnetic touch key.

Scroll Back/Scroll Forward

Customers' bar or restaurant bills can be previewed, item-by-item on any ML-790 in the system and amended if necessary.

Floating Server

Servers may start or finalise food and drinks orders on any ML-790 in the system, avoiding queues and speeding orders to the bar.

Changing Menus

Daily menus, names and prices can be changed simply and quickly via the keyboard or back office software.

Memory Billing and Floating Guest Check

Drinks in the bar followed by a meal in the restaurant are easily tracked to the customer's clearly presented bill or charged to his account. In-house credit cards can be used.

Distribution throughout the United Kingdom and Republic of Ireland by the appointed Dealers of Geller Business Machines, Greenford, Middlesex, England. The information given in this leaflet is subject to change without notice and does not represent a commitment on the part of Geller Business Machines

Real time management information via internet

Access management information from all the ML-790s in your business in-house or at remote sites. Data from ML-790's electronic journal can be transmitted via the internet in real time to your home/head office PC. Watch sales being made as they happen and send price and product changes from your PC to all ML-790s at the point of sale.
